

Energy and Resources Group Spring 2009 Colloquium Series (ER295)

March 11, 2009

Steve Selkowitz

Environmental Technologies Department
Lawrence Berkeley National Laboratory

Energy Efficiency in Buildings: Climate Change Solutions

Stephen Selkowitz is Department Head of the Building Technologies Department at Lawrence Berkeley National Laboratory (LBNL), where he manages a research development and deployment program encompassing windows and daylighting, lighting systems, computer simulation tools, commercial building performance, and demand response research.

Selkowitz has 30 years of experience in the field of building energy performance, with an emphasis on research, development and deployment of energy efficient technologies and design practices. His career has emphasized systems integration and a life cycle performance perspective. The program balances a state-of-the-art research effort with an aggressive technology transfer and implementation effort, so that results of LBL's work can effectively be used by industry and the building community.
